

MUHAMMAD SULEMAN

Full-Stack Developer

+92-336-058-9167 | sulemanefc@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Islamabad, Pakistan

PROFESSIONAL SUMMARY

Full-Stack Software Engineer who owns features end to end — PostgreSQL and Supabase schema design, Go and Node APIs, and the React and Next.js interfaces on top. Has shipped production systems solo across healthcare, e-commerce, ATS and lead generation, plus 20+ enterprise platform integrations (Shopify, Salesforce, QuickBooks, Xero, HubSpot). Equally at home in a Turborepo monorepo, a background worker or a payment flow as in the UI layer.

PROFESSIONAL EXPERIENCE

Software Engineer

Codbeyon — Islamabad (June 2025 – Present)

- Own features end to end across 5+ active client products — requirements, schema, API, interface and deployment
- Sole developer of a Diagnostic Center Management System in daily production use at a live diagnostics business — 14 dashboard modules on Next.js 16, React 19 and Supabase Postgres
- Built a car lease/purchase negotiation marketplace with dynamic form flows, real-time offer states, and role-based dashboards for customers and dealers
- Delivered a UK Masjid Madrasa admin portal (scheduling, student management, reporting) and maintained Rahva Raamat, a 4-site Estonian e-commerce brand

Solution Engineer

Phebsoft — Islamabad (Nov 2024 – March 2025)

- Designed and deployed 20+ automated integrations on Versori connecting QuickBooks, Shopify, WooCommerce, Xero, HubSpot, Salesforce, Notion, Jira, and WordPress
- Built event-driven pipelines synchronizing inventory, financial, CRM, and project data in real time, eliminating manual cross-platform data handling
- Validated every integration in Postman, working directly with business teams to map real processes onto automation flows

Web Developer

Bitsol Technologies — Islamabad (Aug 2023 – Sep 2023)

- Built component-based React/TypeScript applications with Material UI and Storybook

SELECTED PROJECTS

MatchGate — Applicant Tracking System (Solo · Production) | Next.js, Golang, PostgreSQL, Supabase, JWT · [Code](#)

- Solo-built transparent ATS: Go REST API, PostgreSQL schema, Next.js UI, JWT auth and Supabase storage, shipped as an embeddable iframe panel any company can drop into its own site
- Wrote a deterministic rules-based matching engine scoring candidates 0–100% on skills, experience and role requirements — auditable by design, with no LLM anywhere in the scoring path

Niche Scout — Product Sourcing & Market Research Platform | Next.js 16, React 19, Supabase, Playwright, Anthropic/OpenAI APIs · [Code](#) · [Live](#)

- Sourcing pipeline that scrapes wholesale marketplaces with Playwright and computes true landed cost — FX, freight per kg, duty, sales tax and clearing amortised over MOQ — before scoring each product 0–100 on measured local demand and market saturation
- Kept every score deterministic in TypeScript and used the model only to explain a finished verdict, never to produce one; a background worker exports an ExcelJS workbook per run

RAAHI — AI Emergency & Family Safety Platform | Turborepo, Expo, Next.js, Supabase Edge Functions, Twilio, Stripe · [Code](#) · [Live](#)

- Turborepo monorepo pairing an Expo app for elderly users with a Next.js dashboard for family abroad, over a shared Supabase Postgres schema and a typed shared package layer
- Built the alerting pipeline on Supabase Edge Functions: Whisper voice transcription, Claude triage constrained to a fixed JSON schema, and simultaneous Expo Push with Twilio SMS/voice fallback for low-connectivity areas

Diagnostic Center Management System (Solo · Production) | Next.js 16, React 19, TypeScript, Supabase, PostgreSQL

- Sole developer of a live clinical platform spanning 14 dashboard modules — POS, patients, services, inventory, reports, analytics, membership, campaigns, dues, refunds and referrals — over a 38-table Postgres schema with 25+ database functions
- Built a membership and loyalty subsystem with points wallets, an append-only ledger, family groups and automatic reversal when a transaction is refunded, plus multi-branch support with per-branch parameter overrides
- Shipped configurable lab and ultrasound reporting — staff-defined report structures, templates and signatories — with in-browser PDF generation, email delivery and Excel exports across five entities

Supway — Gym E-Commerce Platform | Next.js 15, Supabase (RLS), Stripe, JazzCash/EasyPaisa · [Code](#) · [Live](#)

- Storefront and staff admin with a CheckoutChamp-style funnel engine for upsells, downsells and order bumps, role-based permissions enforced through Supabase RLS, and dual international/local payment rails
- Five switchable themes emitted server-side as scoped CSS variables — no client JavaScript and no flash of unstyled theme

Low Hanging Leads — B2B Lead Platform (Production) | Next.js, TypeScript, REST APIs

- Production lead-generation platform automating prospect discovery, scoring and outreach, with structured form flows and real-time offer management replacing a manual process

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Golang, Python, SQL, HTML5, CSS3

Backend & APIs: Node.js, Golang, FastAPI, Express, REST, GraphQL, JWT authentication, event-driven workflows, background workers

Databases: PostgreSQL, Supabase (incl. Edge Functions & RLS), Redis, SQLAlchemy/Alembic, Firebase, MongoDB

Frontend: React, Next.js (App Router, SSG/Server Actions), React Native, Expo, Capacitor, PWA (Serwist)

State Management: Redux Toolkit, Zustand, React Context API

Testing & Quality: Jest, React Testing Library, Playwright, pytest, ESLint, TypeScript strict mode

DevOps & Tooling: Docker (multi-stage, non-root), GitHub Actions CI, Turborepo, pnpm workspaces, Vercel, Git, Postman

Auth & Security: NextAuth, JWT, bcrypt/bcrypt hashing, Zod validation, role-based access control, SAST/SCA scanning

Payments & Integrations: Stripe, JazzCash/EasyPaisa, Versori, n8n, Webhooks, QuickBooks, Shopify, WooCommerce, Xero, HubSpot, Salesforce

Styling & UI: Tailwind CSS, SCSS/SASS, Material UI, Framer Motion, Storybook

AI-Assisted Development: Cursor, Claude (tool use & MCP), MCP servers, custom agent skills

EDUCATION

Sep 2020 – Feb 2024

BS Computer Science

GPA 3.1/4.0

Institute of Space & Technology, Islamabad

ACHIEVEMENTS

- 1st Place — Speed Programming Competition, IST (2022)
- 2nd Place — University Quiz Competition, IST (2022)
- Certified — MERN Stack, SimpliLearn
