

MUHAMMAD SULEMAN

Software Engineer

+92-336-058-9167 | sulemanefc@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Islamabad, Pakistan

PROFESSIONAL SUMMARY

Software Engineer working across the stack in TypeScript, Go and Python — from FastAPI and Go services and PostgreSQL schema design through to React and Next.js frontends. Has shipped production systems solo, including a four-engine security scanner, a multi-channel emergency alerting platform, and a rules-based ATS. Builds for operability: Docker images, CI pipelines, background workers, tests and alerting rather than one-off scripts.

PROFESSIONAL EXPERIENCE

Software Engineer

Codbeyon — Islamabad (June 2025 – Present)

- Ship production web applications across 5+ client products in React, Next.js, TypeScript and Go, owning work from requirements through deployment
- Sole developer of a Diagnostic Center Management System in daily production use — Next.js 16 and Supabase Postgres — covering POS, patient records, inventory, membership, refunds and configurable reporting
- Integrate third-party APIs into production applications, directly improving functionality and performance

Solution Engineer

Phebsoft — Islamabad (Nov 2024 – March 2025)

- Built and deployed 20+ automated integrations across QuickBooks, Shopify, WooCommerce, Xero, HubSpot and Salesforce using the Versori automation platform
- Designed event-driven workflows connecting disparate systems, strengthening cross-platform API and data-contract knowledge later applied to backend and frontend integration work

Web Developer

Bitsol Technologies — Islamabad (Aug 2023 – Sep 2023)

- Built scalable front-end applications using React.js, TypeScript, Material UI and Storybook
- Improved UI responsiveness and user experience through clean, component-based architecture

SELECTED PROJECTS

VulnScope — Security Vulnerability Scanner | Python, FastAPI, SQLAlchemy, Typer, Docker · [Code](#)

- Scanner combining four engines: SAST over insecure code patterns, dependency CVE lookup against the OSV.dev database, entropy-based secret detection, and Docker/Kubernetes misconfiguration checks
- Shipped one codebase as a Typer CLI, a FastAPI service and a web dashboard, with a watch mode that re-scans on file change and alerts only on findings that are new
- Packaged for CI: multi-stage non-root Docker image, a GitHub Actions workflow that fails the build above a severity threshold, and 30+ unit tests under pytest

RAAHI — AI Emergency & Family Safety Platform | Turborepo, Expo, Next.js, Supabase Edge Functions, Twilio, Stripe · [Code](#) · [Live](#)

- Turborepo monorepo pairing an Expo app for elderly users with a Next.js dashboard for family abroad, over a shared Supabase Postgres schema, versioned SQL migrations and CI
- Built the alerting pipeline on Supabase Edge Functions: Whisper transcription, Claude triage constrained to a fixed JSON schema, and simultaneous Expo Push with Twilio SMS/voice fallback for low-connectivity areas

MatchGate — Applicant Tracking System | Next.js, Golang, PostgreSQL, Supabase, JWT · [Code](#)

- End-to-end transparent ATS: Go + PostgreSQL backend, Next.js frontend, JWT auth, Supabase storage and an embeddable hiring panel served over iframe
- Designed a deterministic rules-based matching engine scoring candidates 0–100% on skills, experience and role fit, explicitly avoiding LLM black-box scoring

Niche Scout — Product Sourcing & Market Research Platform | Next.js 16, Supabase, Playwright, Anthropic/OpenAI APIs
· [Code](#) · [Live](#)

- Scrapes wholesale marketplaces with Playwright and computes landed cost across FX, freight, duty, tax and clearing before scoring products against measured local demand and market saturation
- Kept scoring deterministic and testable in TypeScript, using the model only to explain a computed verdict; a background worker runs crawls with bounded concurrency and exports an Excel workbook per run

Diagnostic Center Management System (Solo · Production) | Next.js 16, TypeScript, Supabase, PostgreSQL

- Sole developer, over 9 months of active development, of a live clinical platform: a 38-table Postgres schema, 25+ database functions and row-level security policies that enforce access in the database rather than the client
- Designed a two-layer authorisation model in which per-user permission grants override role defaults, evaluated through SECURITY DEFINER access functions so the rules hold whichever client calls them
- Built the transactional core — POS with tiered pricing policies and four payment rails, refunds with membership-point reversal, inventory batch and expiry tracking with stock movements, and audit plus report-access logging

Screenshot Bot — Page Capture & Uptime Monitor | Node.js, Playwright · [Code](#)

- Node CLI driving headless Chromium to capture a rotating list of pages on a configurable interval, flagging any page that fails to load inside its timeout, with a live dashboard over the capture history

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Golang, Python, SQL, HTML5, CSS3

Backend & APIs: Node.js, Golang, FastAPI, Express, REST, GraphQL, JWT authentication, event-driven workflows, background workers

Databases: PostgreSQL, Supabase (incl. Edge Functions & RLS), Redis, SQLAlchemy/Alembic, Firebase, MongoDB

Frontend: React, Next.js (App Router, SSG/Server Actions), React Native, Expo, Capacitor, PWA (Serwist)

State Management: Redux Toolkit, Zustand, React Context API

Testing & Quality: Jest, React Testing Library, Playwright, pytest, ESLint, TypeScript strict mode

DevOps & Tooling: Docker (multi-stage, non-root), GitHub Actions CI, Turborepo, pnpm workspaces, Vercel, Git, Postman

Auth & Security: NextAuth, JWT, scrypt/bcrypt hashing, Zod validation, role-based access control, SAST/SCA scanning

Payments & Integrations: Stripe, JazzCash/EasyPaisa, Versori, n8n, Webhooks, QuickBooks, Shopify, WooCommerce, Xero, HubSpot, Salesforce

Styling & UI: Tailwind CSS, SCSS/SASS, Material UI, Framer Motion, Storybook

AI-Assisted Development: Cursor, Claude (tool use & MCP), MCP servers, custom agent skills

EDUCATION

Sep 2020 – Feb 2024

BS Computer Science

GPA 3.1/4.0

Institute of Space & Technology, Islamabad

ACHIEVEMENTS

- 1st Place — Speed Programming Competition, IST (2022)
- 2nd Place — University Quiz Competition, IST (2022)
- Certified — MERN Stack, SimpliLearn
